---

Aspiring Game Developer with hands-on project experience in Unreal Engine (C++ and Blueprints) and Blender. Built gameplay systems (player movement, combat, enemy AI, level-up systems), designed levels and environments, and created 3D assets and animations. Fresher seeking a Game Developer role.

SKILLS

Game Development: Unreal Engine, Blueprints, Game Design, Level Design, Game Testing
3D & Art: Blender, 3D Modeling, 3D Asset Creation, Environment Art, Animation
Programming: C++, C, Basic SQL
UI/UX: UI Design, UX Principles, Game UI, Prototyping
Other: Git/GitHub, Debugging, Problem Solving, Gameplay Prototyping

EDUCATION

B.Tech, Computer Science & Engineering — Bhagwan Parshuram Institute of Technology (2028)
Short-Term Course Unreal Engine — Arena Animation Saket(2026)
Senior Secondary Education — CBSE Board (2022)

EXPERIENCE

Game Development & 3D Projects
Independent Projects | 2026–Present
- Built gameplay prototypes and 3D game projects in Unreal Engine using C++ and Blueprints, producing playableinteractive builds.
- Implemented player movement, combat mechanics, enemy AI, health, experience and level-up systems in UnrealEngine, forming the core gameplay loop.
- Designed game environments, levels and gameplay interactions in Unreal Engine, shaping the flow of playerexperience.
- Created 3D assets and animations in Blender and integrated 3D content into game-development workflows.
- Tested gameplay systems, identified bugs, and iterated on mechanics to improve player experience.

PROJECTS

Escape Room | Unreal Engine
- Developed a playable Unreal Engine escape-room project focused on exploration, environmental interaction and puzzle-based gameplay.
- Designed the level and gameplay flow to encourage player exploration and interaction with the environment.

3D Platformer Game | Unreal Engine
- Built a playable 3D platformer with player movement, environmental obstacles and gameplay interactions using C++and Blueprints.
- Designed and integrated 3D assets and environments in Unreal Engine, focused on level design and gameplay flow.

MetaHuman Cinematic Animation | Unreal Engine
- Created a character-driven cinematic using MetaHuman characters and Unreal Engine 5.
- Used Live Link for real-time performance capture and Camera Rail for smooth cinematic camera movements, focusing on character performance and visual storytelling.
